

Report

Online Job Recruitment Website

Executive Summary

- This investigation was conducted to assess the security and legitimacy of a suspicious online job recruitment website.
- The URL was initially flagged by one security vendor on VirusTotal, prompting further analysis using VirusTotal and Hybrid Analysis.
- The objective was to determine whether the website exhibited malware-related behaviour, phishing indicators, or characteristics commonly associated with online recruitment scams.

Investigation Details

Target URL: [Zenfy: Your Gateway to Mastery & Professional Growth](#)

Date of Investigation:

14/06/2026

Analyst:

Nguyen Nhat Minh

Tools Used:

VirusTotal

Hybrid Analysis

DNS Lookup

Detection Ratio:

1/92 Security Vendors

Detection Results:

Chong Lua Dao: Malicious

Gridinsoft: Suspicious

Majority of vendors: Clean

VirusTotal Analysis

Figure 1. VirusTotal URL Analysis Results for zenfy.ac

Detection Ratio:

1/92 Security Vendors

Detection Results:

Chong Lua Dao (Antiscam of Vietnam): Malicious

Gridinsoft: Suspicious

Majority of vendors: Clean

Assessment

- Only one security vendor classified the URL as malicious, while most vendors considered it clean.
- This indicates a low-confidence detection and requires further investigation before concluding.

Hybrid Analysis Results

MITRE ATT&CK™ Techniques Detection					
Resource Development					
ATT&CK ID	Name	Tactics	Description	Malicious Indicators	Suspicious Indicators
T562.001	Domains	• Resource Development	Adversaries may acquire domains that can be used during targeting. Learn more		• Short-term SSL certificate detected
Defense Evasion					
ATT&CK ID	Name	Tactics	Description	Malicious Indicators	Suspicious Indicators
T562.001	Disable or Modify Tools	• Defense Evasion	Adversaries may modify and/or disable security tools to avoid possible detection of their malware/tools and activities. Learn more		• Loads the AMSI (Antimalware Scan Interface) DLL
T1027	Obfuscated Files or Information	• Defense Evasion	Adversaries may attempt to make an executable or file difficult to discover or analyze by encrypting, encoding, or otherwise obfuscating its contents on the system or in transit. Learn more		• Detection of obfuscated or encoded content in URLs
T563.002	Code Signing	• Defense Evasion	Adversaries may create, acquire, or steal code signing materials to sign their malware or tools. Learn more		• The input sample is signed with a certificate
T1140	Obfuscated/Decoded Files or Information	• Defense Evasion	Adversaries may use Obfuscated Files or Information to hide artifacts of an intrusion from analysis. Learn more		• Shows ability to deobfuscate/decode files or information
Discovery					
ATT&CK ID	Name	Tactics	Description	Malicious Indicators	Suspicious Indicators
T1057	Process Discovery	• Discovery	Adversaries may attempt to get information about running processes on a system. Learn more		• Spawns new processes that are not known child processes • Spawns new processes • Process launched with changed environment
Command and Control					
ATT&CK ID	Name	Tactics	Description	Malicious Indicators	Suspicious Indicators
T1021	Application Layer Protocol	• Command and Control	Adversaries may communicate using OSI application layer protocols to avoid detection/network filtering by blending in with existing traffic. Learn more		• Found potential URL in binary/memory • Contacts server • Contacts domains
T1021.001	Web-Protocols	• Command and Control	Adversaries may communicate using application layer protocols associated with web traffic to avoid detection/network filtering by blending in with existing traffic. Learn more		• Communicates with HTTP web server (GET/POST requests) • GETs files from a web server • Contacts to random domain names • Identifies external resources in HTML content • Detected client-side tracking infrastructure with automated data submission
T1028.001	Standard Encoding	• Command and Control	Adversaries may encode data with a standard data encoding system to make the content of command and control traffic more difficult to detect. Learn more		• HTTP request contains Base64 encoded artifacts
T1048.003	Domain Generation Algorithms	• Command and Control	Adversaries may make use of Domain Generation Algorithms (DGAs) to dynamically identify a destination domain for command and control traffic rather than relying on a list of static IP addresses or domains. Learn more		• High entropy domain detected
T1021.004	DNS	• Command and Control	Adversaries may communicate using the Domain Name System (DNS) application layer protocol to avoid detection/network filtering by blending in with existing traffic. Learn more		• Queries DNS server
T1105	Ingress Tool Transfer	• Command and Control	Adversaries may transfer tools or other files from an external system into a compromised environment. Learn more		• Dropped files
Exfiltration					
ATT&CK ID	Name	Tactics	Description	Malicious Indicators	Suspicious Indicators
T1048.003	Exfiltration Over Unencrypted Non-C2 Protocol	• Exfiltration	Adversaries may steal data by exfiltrating it over an un-encrypted network protocol other than that of the existing command and control channel. Learn more		• Data transmitted in plain text over an insecure network protocol/port
T1048	Exfiltration Over C2 Channel	• Exfiltration	Adversaries may steal data by exfiltrating it over an existing command and control channel. Learn more		• POSTs data to a web server

Figure 2 - Hybrid Analysis MITRE ATT&CK Findings

Threat Score: N/A
MITRE ATT&CK Findings

ATT&CK ID	Technical Name
T1071	Application Layer Protocol
T1071.001	Web Protocols
T1071.004	DNS
T1027	Obfuscated Files or Information
T1105	Ingress Tool Transfer

Assessment

- The observed MITRE ATT&CK mappings were primarily associated with standard web communication behaviour such as HTTP requests, DNS queries, and resource loading.
- No malicious indicators or suspicious indicators were observed during sandbox execution.

ScamAdviser

Facts about zenfy.ac

Figure 4 - ScamAdviser Analysis Results for zenfy.ac

Assessment

- The registrant information is protected through a privacy protection service.
- While privacy protection is commonly used by legitimate organizations, it may reduce transparency regarding domain ownership and should be considered during risk assessment.

Trustpilot Investigation

Figure 5 - Trustpilot Reviews

Assessment

- Some users have reported some issues with paid registration that caused them losses without being able to recover the equivalent value
- Common complaints included:
 - Unexpected subscription renewals
 - Continued billing after cancellation
 - Difficulty contacting customer support
 - Concerns regarding account charges

Risk Assessment

Category	Assessment
Malware	Not Confirmed
Phishing	Possible
Scam	Possible
Risk Level	Low to Medium
Confidence	Medium

Analyst Observations

- Although technical analysis didn't detect any malware, the website promotes online typing jobs, which might need a closer look. Jobs like these usually pay quite low, unlike the promises mentioned on the Zenfy website.
- It seems like the site relies heavily on marketing and tracking tools.

Users should exercise caution before:

- Providing personal information
- Making financial payments
- Sharing identification documents
- Registering for paid programs

Summary

- No evidence of malware delivery, command-and-control communication, or malicious file downloads was identified during the investigation.
- However, the website's business model and recruitment claims may present potential fraud or social engineering risks.
- Further OSINT investigation is recommended before considering the website trustworthy.
